

Aeronautics Personnel Medical Expertise Center (CEMPA)

Boosting medical economic activity

Project description

The Aeronautics Staff Medical Expertise Center (CEMPA) for commercial and military flight crews is designed both to ensure Senegal's independence in medical expertise for aeronautical staff, and to boost medical economic activity on the airport platform.

Project objectives

AIBD SA, with CEMPA, is committed to medical independence in the aeronautical field. The goal to make this a reference platform for the medical care of aeronautical staff in the sub-region also contributes to boosting medical economic activity, which is an important element of the air hub offering several investment opportunities.

SENEGAL
2035 AIR HUB

AIBD
Building the future
