

Maintenance Repair Overhaul Center (MRO)

A world-renowned center

Project description

The MRO is designed to offer different types of maintenance, from Check A to Check D, with a roof of constant height to accommodate Code aircraft.

Project objectives

The construction of this MRO project will position Senegal as a reference maintenance destination for sub-regional airlines. This will enable them to optimize their operational and financial performance. Eventually, the MRO will generate 300 direct jobs. Our goal is to make it a world-class center by 2035.

SENEGAL
2035 AIR HUB

AIBD
Building the future

Scope of work

- Infrastructure
- Equipment
- Hangar extension
- Training
- Aeronautical industry
- Partnership for center management

Location

Diass - AIBD
